

PhotoShop DVD & Blu-ray Menu Setup

Creating your DVD menus in PhotoShop using the built-in menu templates will eliminate the noticeable squeezing or stretching of your text and art when used in the DVD.

1. Select "New..." from file menu in PhotoShop. In the resulting dialog box, click on Presets and select Film & Video.

2. Next, click on Size to select your video's aspect ratio (dimensions). NTSC DV is for 4:3 (conventional TV dimension) and NTSC DV Widescreen is for 16:9 (modern flat panel TV dimension). Use one of the two "HDTV" settings for Blu-ray.

3. Finally, if not already on, turn on the Guides in PhotoShop: View > Show > Guides (as of PhotoShop CS5)
